**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

## Office Action Summary

Application No.

10/046,749

Applicant(s)

HUANG ET AL.

Examiner

Nguyen Ngo

Art Unit

2616

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 20 June 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-30 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-30 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

- ☒ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☐ Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date \_\_\_\_\_
- ☐ Notice of Informal Patent Application
- ☐ Other: \_\_\_\_\_

## **DETAILED ACTION**

### ***Response to Amendment***

This communication is in response to the amendment of 6/20/2007. All changes made to the Claims have been entered. Accordingly, Claims 1-30 are currently pending in the application.

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. Claims 1-13, and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Haartsen (US 2002/0131486), in view of Chan et al. (US 7200103), hereinafter referred to as Haartsen and Chan.

Art Unit: 2616

**Regarding claim 1, 10, 11** Haartsen discloses a method for training a radio receiver including receiving, the initial portion containing at least one flag to identify a corresponding reference training sequence to be selected by the receiver (a method of providing advance information (initial portion) to a receiver in a home network, page 2 [0016]). Haartsen further discloses;

that in digital communication, packets are used that are preceded by a preamble, which is followed by an information stream (payload, page1 [0012]) and further discloses that a field in the preamble is reserved for a flag b, which provides an indication to the receiver to aid the receiver in selecting a corresponding reference training sequence (providing auxiliary coding to said receiver, page 4 [0040]). It is noted that applicant discloses auxiliary coding (flag) is used to provide information to the receiving device to seed on training component with an appropriate predetermined value (reference training period) as stated on page 9.

of transmitting data packet including payloads to a receiver (providing data packets to said receiver, page 3 [0036]).

that the transmitter inserts flags in the preamble to indicate the training sequence and the modulation scheme used for the payload (page 4 [0040]). Haartsen further discloses that the flag provides an indication to the receiver to aid the receiver in selecting a corresponding reference training sequence (perform a table look-up in a station pre-training table to determine one or more training values (reference training sequence), page 4 [0041]).

Haartsen however fails to disclose the specific limitation of having the auxiliary coding comprising a station ID parameter of a transmitting home network device to said receiver which is used to perform table look-up in a station pre-training table stored in said receiver, and allowing said receiver to communicate with a plurality of stations having different transmission characteristics on a packet-by-packet basis, as amended. Haartsen however discloses of a transmitter and a receiver of a transmission system, and provides the motivation of training a radio receiver according to a training sequence dependent on a specified transmitter to produce successful communication between the transmitter and the receiver. Haartsen further discloses that the invention relates to radio communications for training an equalizer in a radio receiver (page 1 [0001]). It is well known in the art that radio communications not only incorporates a single transmitter and a single receiver, but also covers a plurality of transmitter and receivers. Haartsen's simply uses the concept of a single transmitter to receiver to illustrate the method of training a radio receiver in a simple and easy way. In the same field of endeavor, Chan discloses of a multiuser communication system comprising at least two user transmitters and a receiver having an antenna for receiving signals from the transmitters (allowing said receiver (receiver 14 of figure 1) to communicate with a plurality of stations (receivers 12 of figure 1) having different transmission characteristics on a packet-by-packet basis co2 lines 25-30 and figure 1). Chan further discloses that the receiver comprises memory for storing predetermined data including training sequences for each of the user transmitters (table look-up (memory) in a station

Art Unit: 2616

pre-training table stored in said receiver, col2 lines 35-40 and figure 2). It would have thus been obvious to a person skilled in the art at the time the invention was made to incorporate the system of having a receiver communicate with a plurality of transmitters involving the use of predetermined training sequences as disclosed by Chan into the method of training a radio receiver as disclosed by Haartsen, in order to effectively train a radio receiver to not just a single transmitter, but a plurality of transmitters. It would have been further obvious to a person skilled in the art to incorporate the concept of having an identifier (such as source address/local address) for the transmitter be included in packet for pre-training lookup of a reference training sequence (station ID parameter is used to perform a table look-up to determine training values) in order to correctly and successfully equalize a receiver to the correct transmitter.

**Regarding claim 2, 3, and 4**, the combination of Haartsen, and Chan, more specifically Haartsen discloses the flag be inserted in the preamble (auxiliary coding is encompassed within said data packet, auxiliary coding is inserted into a preamble of said data packet, page4 [0043] and page 1 [0012]). It should be noted that the preamble is transmitted before the payload.

**Regarding claim 5 and 6**, the combination of Haartsen, and Chan fails to disclose of transmitting the auxiliary coding with a same RF front end as said data packet or transmitting said auxiliary coding with a different RF front end as said data packet. Haartsen however discloses from figure 3 of a transmitter and a receiver system for

Art Unit: 2616

transmission of data. It should thus be obvious to transmit the auxiliary coding with the same RF front end or a different RF front end from said data packet, as it is well known in the art that transmitters/receivers incorporate RF front ends for efficient data transmissions. It should be noted that transmitting of auxiliary coding through a specified RF front end is simply a systems parameter of the transmission system and it's components.

**Regarding claim 7, 8, and 9**, the combination of Haartsen, and Chan, more specifically Haartsen discloses that the training sequence will vary according to the modulation scheme applied such as QAM, and BPSK (page 3 [0034]) and that these modulation schemes are applied to both the preamble and payload (auxiliary coding is transmitted using FSK, QAM, or BPSK, page4 [0043]). It should be noted that FSK is another modulation scheme known in the art.

**Regarding claim 12 and 13**, the combination of Haartsen, and Chan, discloses all the limitations of claim 12 and 13. It should further be noted that it would have been obvious to have the source address comprise 5 or fewer symbols or the source address comprise 5 or fewer bits, as these are simple parameters of the system. The motivation to have fewer bits and symbols (5 or fewer) would be to efficiently use bandwidth of the channel and efficiently use the given bits in a source address field. One would use fewer bits in order to save resource and bandwidth.

Art Unit: 2616

**Regarding claim 15**, the combination of Haartsen, and Chan, more specifically Haartsen discloses the flag indicates a modulation scheme applied to the segments in the data packet (auxiliary coding comprises coding information and data mode).

**Regarding claims 16-19, 20, 21, 22-24, 25-28 and 30**, the combination of Haartsen, and Chan discloses all the limitations as discussed above. Haartsen discloses a communication system comprising a transmitter (apparatus) and a receiver. It is noted that these claims are simply the apparatus performing the methods as discussed above.

4. Claims 14 and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Haartsen (US 2002/0131486), in view of Chan et al. (US 7200103), further in view of Chung et al. (US 6731618), hereinafter referred to as Haartsen, Chan, and Chung.

**Regarding claim 14**, the combination of Haartsen, and Chan, fails to disclose the specific limitation of having the auxiliary coding be provided in a signal independent from a signal including said data packet. It is however noted that sending auxiliary data over an independent signal separate from a data signal is a well-known technique known in the art, that provides efficient transmissions and error corrections to the data, thus providing the motivation to do so.

Chung further discloses that a forward data preamble subchannel is used to transmit the MAC address and the auxiliary information (auxiliary coding is provided in a signal independent) and that the forward packet data is transmitted through the forward

Art Unit: 2616

packet data traffic subchannel (signal including said data packet, col5 lines 1-9). It would have thus been obvious to incorporate the transmitting of auxiliary data and packet data through independent subchannels (signals) as disclosed by Chung into the method for training a radio receiver as disclosed by the combination of Haartsen, and Chan, to efficiently transmit data from transmitter to receiver.

**Regarding claims 29**, the combination of Haartsen, Chan, and Chung discloses all the limitations as discussed above. Haartsen discloses a communication system comprising a transmitter (apparatus) and a receiver. It is noted that these claims are simply the apparatus performing the methods as discussed above.

### ***Response to Arguments***

5. Applicant's arguments with respect to claims 1-30 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a) Hottinen et al. (US 5995499), Signal Detection In A TDMA System.

b) Suzuki (US 6483866), Multi-Station Transmission Method And Receiver For Inverse Transforming Two Pseudo-Orthogonal Transmission Sequences Used For Metric Calculation And Base Station Selection Based Thereon.

c) Holma et al. (US 7085248), Method Of Identifying Information Addressed To A User In A Communication System And A Communication System.

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nguyen Ngo whose telephone number is (571) 272-8398. The examiner can normally be reached on Monday-Friday 7am - 3:30 pm.

Art Unit: 2616

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wing Chan can be reached on (571) 272-7493. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
